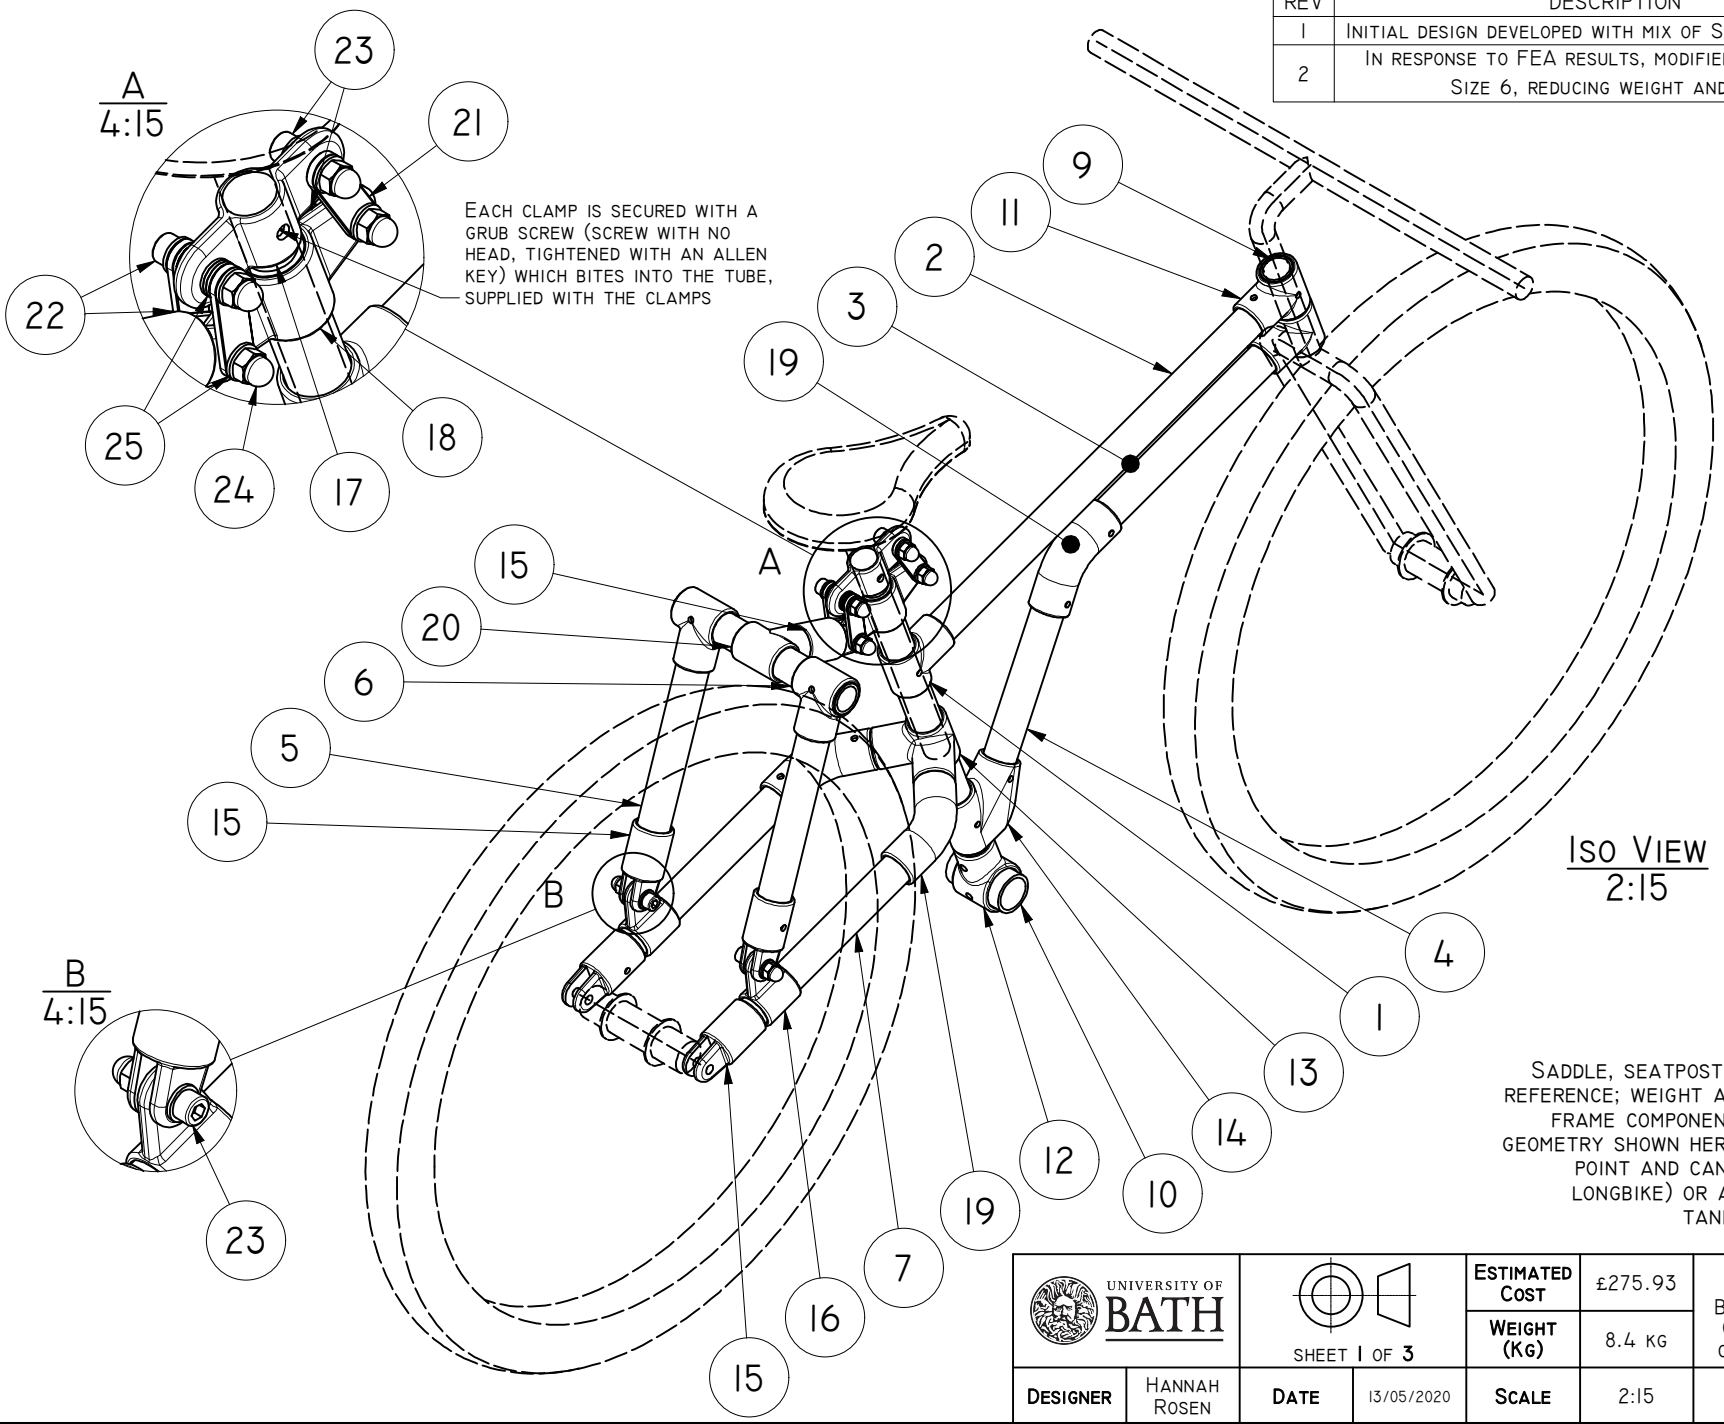
REV	DESCRIPTION	DATE
1	Initial design developed with mix of Size 6 and Size 7	08/05/2020
2	In response to FEA results, modified to use only Size 6, reducing weight and cost	10/05/2020



University of Bath		sheet 1 of 3		Estimated Cost	£275.93
				Weight (kg)	8.4 kg
Designer	Hannah Rosen	Date	13/05/2020	Scale	2:15

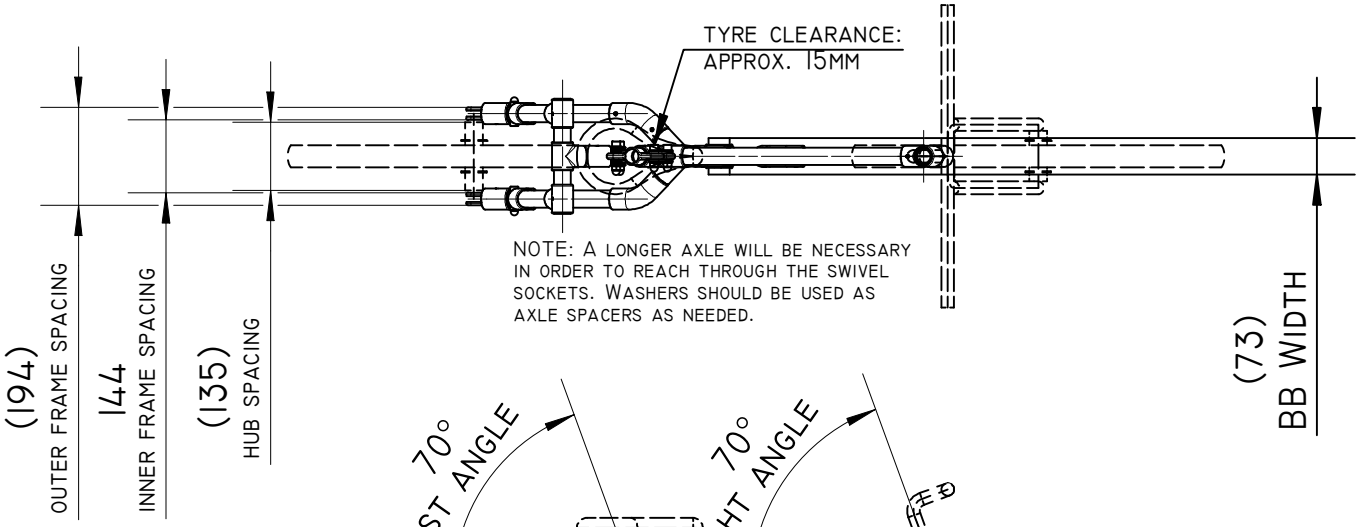
Bicycle Frame

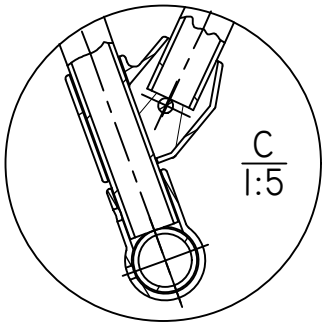
Build-It-Yourself; Customisable; Constructed from hand railing clamps; Design for Performance

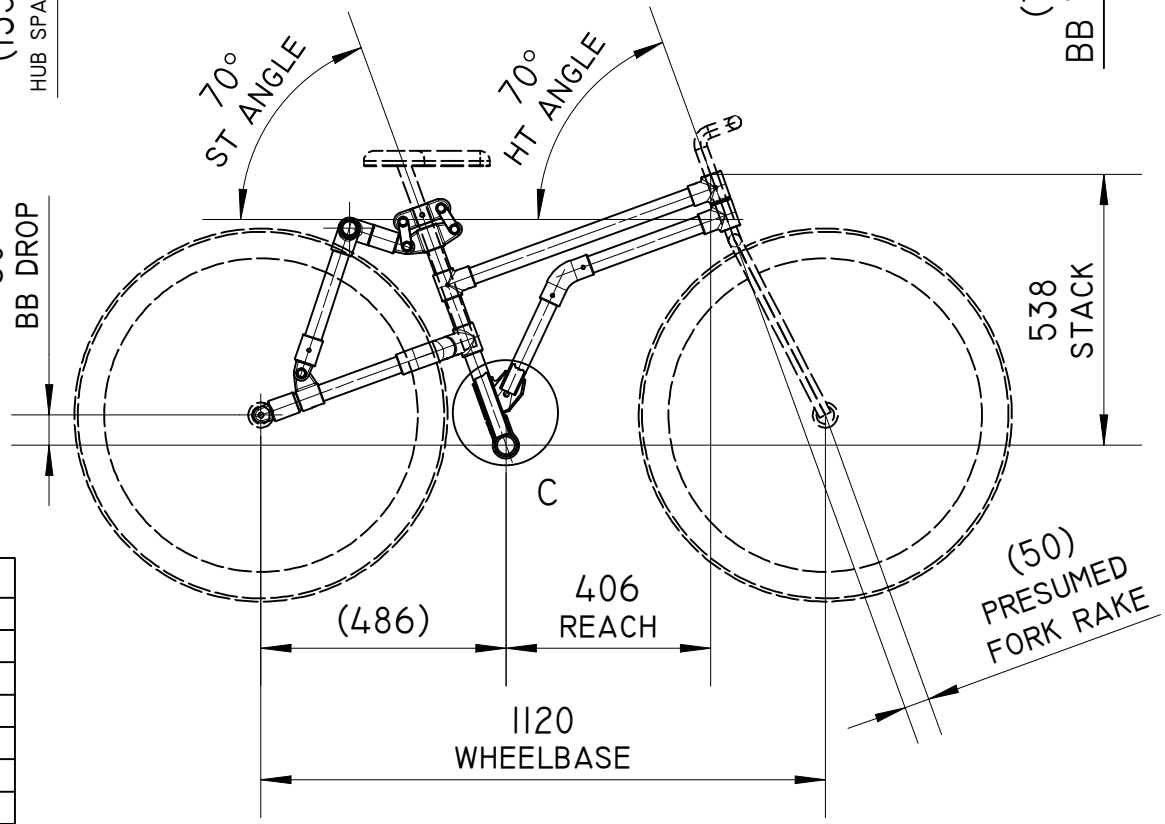
BCL-DFP
REV 2

NOTES ON COMPATIBILITY:
Components below can be taken from a cheap second-hand donor bike or purchased seperately. Use shims if necessary, leaving a gap for the clamp's grub screw.

1. Bottom Bracket: 73mm English Thread
2. Fork: 1" ISO standard fork steerer. Ø41mm HT for a 1⅛" fork also available (Ceeway ZALCI8210), but needs size 7 clamps.
3. Seatpost: 26-27.5mm OD for Size 5 clamp (M51-5, shown here) or 21-22.5mm OD for Size 4 clamp (M50-4).
4. Wheels: 29" rims with 44mm tyres and 135mm rear hub spacing shown for reference. For larger wheels (or longer wheelbase) - use longer CS, SS, CSS, and/or SSS tubes. For smaller wheels - use shorter CS and SS tubes, and/or longer axle spacers (CSS shown at minimum).
5. Brakes: Front - any compatible brake. Rear - use coaster brake or create attachment points for calipers with additional clamps.
6. Gears: Single speed or hub gears are the simplest but not the only options. Consider the weight of the entire bike when selecting gear ratio(s).







NOTE: All tube lengths are provisional as there is limited information on how far into the clamps each tube is inserted. Leaving a 10-20mm margin for adjustment is advised when cutting tubes.

SAMPLE GEOMETRIES			
DIM	SMALL*	MEDIUM	LARGE
RIDER HEIGHT (IN)	5'3" TO 5'7"	5'7" TO 6'0"	6'0" TO 6'4"
STACK (MM)	538	556	585

NOTES:

1. SADDLE, SEATPOST, AND WHEELS ARE SHOWN FOR REFERENCE; WEIGHT AND ESTIMATED COST APPLY TO FRAME COMPONENTS ONLY.
2. THE SIMPLE BICYCLE GEOMETRY SHOWN HERE IS INTENDED AS A STARTING POINT AND CAN BE CUSTOMIZED (IE. FATBIKE, LONGBIKE) OR ADAPTED (IE. CARGO TRICYCLE, TANDEM) BY THE USER IF DESIRED.
3. GRUB SCREWS MUST BE TIGHTENED TO 40NM WITH A TORQUE WRENCH. A GOOD QUALITY THREAD LOCKER MUST BE USED ON ALL THREADS. LOCTITE 243 IS A GOOD CHOICE AS IT IS STRONG ENOUGH TO RESIST LOOSENING DUE TO SHOCK AND VIBRATION, BUT CAN STILL BE DISASSEMBLED WITH HAND TOOLS. IT ALSO TOLERATES CONTAMINATION WITH OIL TO A CERTAIN EXTENT (SUCH AS CHAIN GREASE). CHECK GRUB SCREWS REGULARLY AND RE-TIGHTEN TO 40NM IF NECESSARY.
4. CARE SHOULD BE TAKEN TO CHOOSE A FORK, BOTTOM BRACKET BEARINGS, WHEELS, AND OTHER COMPONENTS WHICH ARE COMPATIBLE WITH THE FRAME COMPONENTS (SEE SHEET 2).
5. ALL TUBE LENGTHS ARE PROVISIONAL AS THERE IS LIMITED INFORMATION ON HOW FAR INTO THE CLAMPS EACH TUBE IS INSERTED. LEAVING A 10-20MM MARGIN FOR ADJUSTMENT IS ADVISED WHEN CUTTING TUBES.
6. MORE INFORMATION CAN BE FOUND AT: HTTPS://GITHUB.COM/HANNAHROSEN57/ADJUSTABIKE-2.0
