
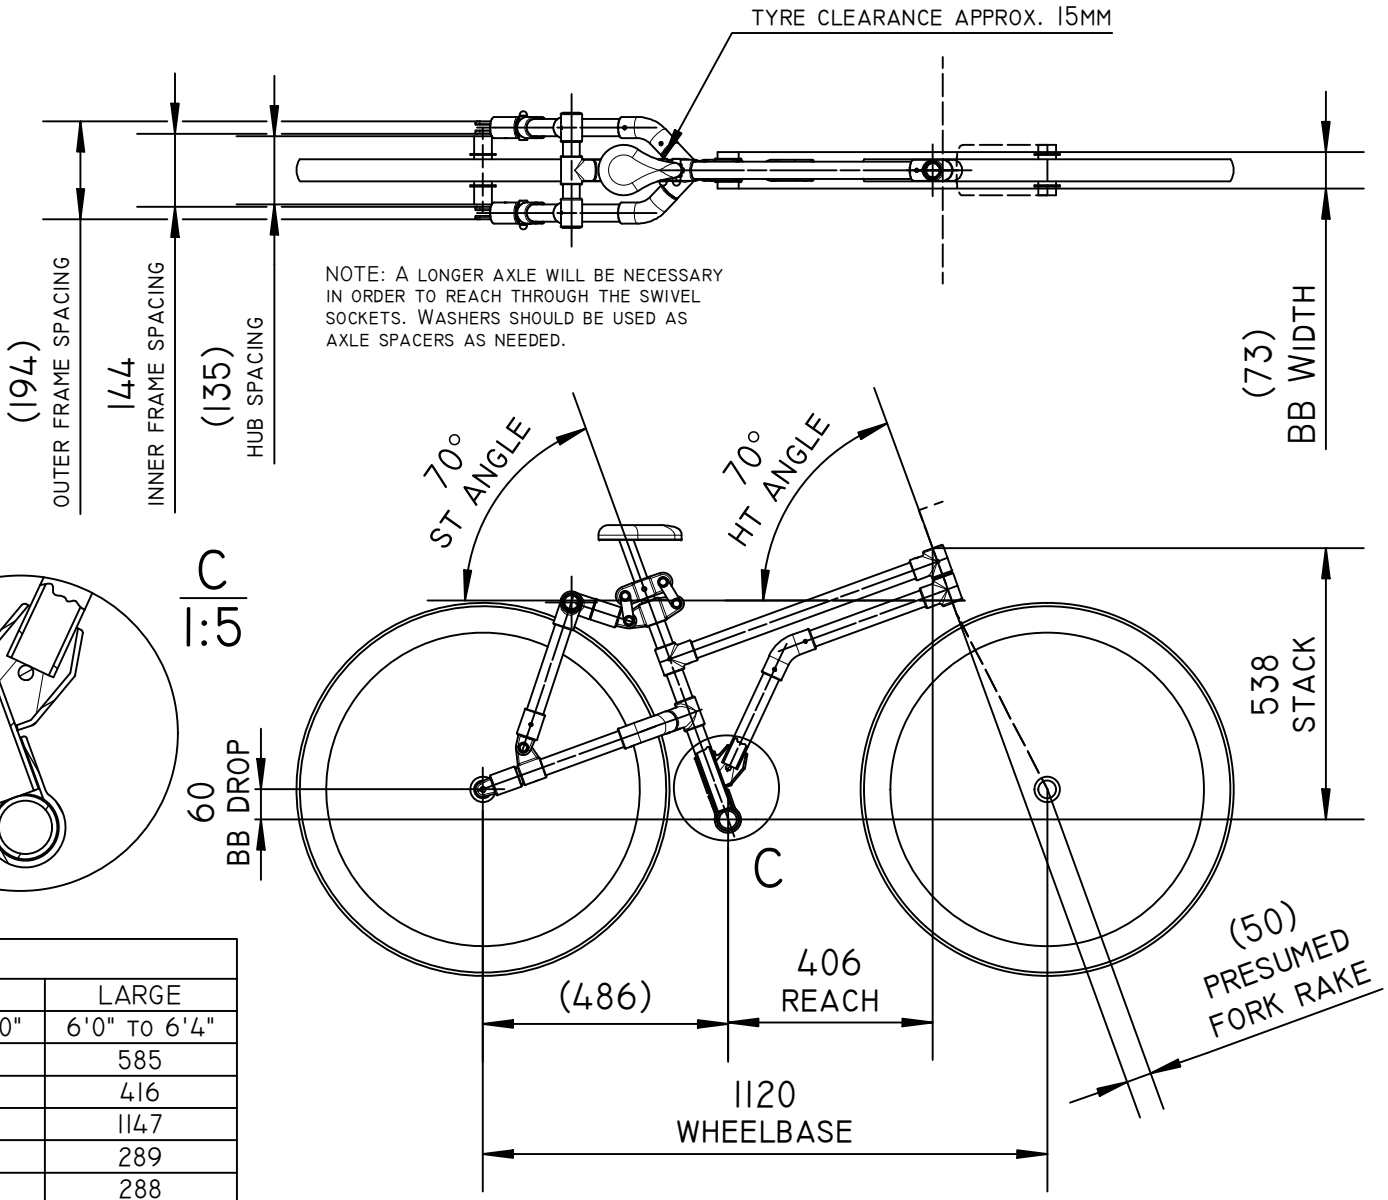
UNIVERSITY OF BATH		SHEET 1 OF 3		ESTIMATED COST	£275.93	DIY BICYCLE DESIGN FOR PERFORMANCE
				WEIGHT (KG)	8.4 KG	
DESIGNER	HANNAH ROSEN	DATE	13/05/2020	SCALE	2:15	BCL-DFP REV 2

NOTES ON COMPATIBILITY:

1. In general, if a component is a fraction of a mm away from a perfect fit, consider employing a simple shim. Shim stock is readily available in a variety of thicknesses and materials, or aluminum foil could be folded to the right thickness. Leave a gap for the grub screw in the clamp.
2. Bottom Bracket: 73mm English Thread
3. Fork: Head tube is designed for 1" ISO standard fork steerer. Ceeway also sells a Ø41mm HT for a $1\frac{1}{8}$" fork, but note that this would need to be used with size 7 clamps.
4. Seatpost: Should be Ø26-27.5mm to fit the Size 5 clamp shown here (M51-5), or Ø21-22.5mm if a Size 4 clamp is used (M51-4).
5. Wheels: Frame can accommodate 29" rims with 44mm tyres and 135mm rear hub spacing (shown for reference). Seatstays and Chainstays can be made shorter if desired for smaller wheels, but rear hub spacing cannot be less than 144mm. If a wider spacing is desired the chainstay spacers can simply be cut a little longer. A long axle and axle spacers should be used (These can just be washers).



NOTE: All tube lengths are provisional as there is limited information on how far into the clamps each tube is inserted. Leaving a 10-20mm margin for adjustment is advised when cutting tubes.

SAMPLE GEOMETRIES

NOTES:

1. A GOOD QUALITY THREAD LOCKER MUST BE USED ON ALL THREADS. LOCTITE 243 IS A GOOD CHOICE AS IT IS STRONG ENOUGH TO RESIST LOOSENING DUE TO SHOCK AND VIBRATION, BUT CAN STILL BE DISASSEMBLED WITH HAND TOOLS. IT ALSO TOLERATES CONTAMINATION WITH OIL TO A CERTAIN EXTENT (SUCH AS CHAIN GREASE). THERE ARE ALSO CHEAPER ALTERNATIVES AVAILABLE SUCH AS RS COMPONENTS' OWN BRAND THREAD LOCKERS.
2. CARE SHOULD BE TAKEN TO CHOOSE A FORK, BOTTOM BRACKET BEARINGS, WHEELS, AND OTHER COMPONENTS WHICH ARE COMPATIBLE WITH THE FRAME COMPONENTS (SEE SHEET 2).
3. ALL TUBE LENGTHS ARE PROVISIONAL AS THERE IS LIMITED INFORMATION ON HOW FAR INTO THE CLAMPS EACH TUBE IS INSERTED. LEAVING A 10-20MM MARGIN FOR ADJUSTMENT IS ADVISED WHEN CUTTING TUBES.
